"The 1952 Smallpox Epidemic in Gdansk."

Warsaw, Przegląd Epidemiologiczny, Vol 19, No 4, 1965; pp 421-431.

Abstract [English summary modified] : Report includes detailed history of a 30-year-old sailor on Indian ship that first came down with the disease, and data on subsequent work, on clinical and laboratory (including virus seeding and isolation of 2 strains from chorioallantoic membrane) on 43 (or 23 as corrected in editor's footnote) other patients, mostly crew members; 346 specimens were taken to inoculate into embryonated eggs. Two photomicrographs; 4 Tables; 4 Soviet, 6 Polish and 3 Western references.

"Familial Neurovegetative Dysautonomia in a Five-Months Old Infant."

Warsaw, Polski Tygodnik Lekarski, Vol 13, No 28, 8 Jul 63, pp 1033-1035

Abstract: [Authors' English summary modified] The authors describe a case of familial neurovegetative dysautonomia in a five-months old baby, which exhibited all the typical manifestations of the syndrome, as described by Riley, with the exception of two: There was no disturbance of tear excretion in crying, and the child was of a non-somitic origin. Infant died after three months of observation in the clinic because of pneumonia. Histopathological study of the brain revealed no morphological anomalies. There are 10 references: 3 Polish, 3 German, and 4 English.

✓ Comparison of the physiological effects of lactic and acetic acids on the rat. Zofia Wysokinska (Zakład Fizjologii Żywienia Człowieka S.G.G., Warsaw). Roczniki Państwowego Zakładu Hig. 3, 273-02 (1952).—Lactic (I) and acetic (II) acids were found to have similar physiol. effects on the rat. However, when the rats were fed 1.5 g./kg. of acids for 3 months there was a greater loss of wt., decrease in hemoglobin content, red blood cells, and increase in blood CO₂ for II than for I. There was no change in blood pH. The lethal dose (g./kg.) was for I 11.25 and for II 6.25. A much milder reaction was noted when the acids were given ad lib. 21 references. S. J. P.

TEXT: A gyroscopic device is patented which secures the maintain-
ing of a preset course of a ship. The course and helm position
pickups are contactless, of induction type with moving cores and
connected in a difference circuit through a magnetic amplifier.
The course pickup is connected to the gyroscope. The cores have
different shapes which are so chosen that when the ship deviates
from a preset course a signal of necessary magnitude is produced.
It is possible to control the dependence of the helm position on
the deviation of the ship from the course. There is an arrangement
for null positioning of the control device independently of the
longitudinal axis of the ship. / Abstracter's note: Complete trans-
lation. /

("Rept. Centr. lab. ochrony radiol.", 1961, no. 8, 10 pp., ill.,
English, summaries in Polish and Russian)

TEXT:

Statistical data are reported on personnel monitoring in Poland during the year 1960 by the method of film dosimetry. The control concerned doses received by people working with open preparations, with closed γ -emitters containing > 10 milligram-equivalent of radium, with closed β -emitters, containing > 1 millicurie at a β -spectrum maximum energy higher than 0.5 MeV, and with neutron sources creating at a distance of 0.5 m a dose strength higher than 30 millirem/hour (rem - roentgen equivalent man). 1,573 people received a dose < 0.5 roentgen, 217 - from 0.5 to 1.5 roentgen, 208 - from 1.5 to 5 roentgen, 39 - from 5 to 12 roentgen, and 5 - more than 12 roentgen. Among those who received more than 5 roentgen there were 19 men and 25 women from which 28 people

ALEKSANDROW D. and WYSZNACKA W. II Klin. Chor. wewn., Akad. med., Warszawa. O tzw. niedotlenieniu prawej komory So-called hypoxia of the right ventricle Polsk. Tyg. lek. 1953, 8/21 (745-748) Graphs 3

The cases were selected in which reversed T was found in precordial leads, corresponding to the right ventricle (C₁ to C₃ or even C₄). In 47 patients this finding could not be explained either by right ventricular strain, right bundle branch block or by infarction. In 16 cases these changes were due to acute or chronic cor pulmonale, in 10 cases to a myocardial lesion. In the remaining 21 cases various climacteric disturbances were present. In none of these latter cases could the previous suspicion of coronary disease be confirmed clinically (anamnesis, physical examination, X-rays, ECG, nitroglycerin and gynergen tests). The authors are of the opinion that the ECG changes mentioned do not represent an impaired blood supply but correspond to disorders of the nervous regulation of trophic function of the myocardium.

A woman of 35 with a tumour of the right suprarenal gland and a typical Cushing syndrome was admitted with severe congestive heart failure, not controllable by standard measures such as low sodium diet, mercurial diuretics and digitalis. The administration of KCl was followed by considerable improvement and the patient was successfully operated on. The tumour proved to be a carcinoma. After the operation most features of the Cushing syndrome gradually regressed. The patient was followed up for 6 months after the operation. She is kept in good health with a daily dose of 20 mg. ACTH.

7045. THE WATER DIURESIS IN CHRONIC FAILURE OF THE CIRCULATION -
Spostrzeżenia nad diurezą wodną w przewlekłej niewydolności krążenia -
Wyszynacka W., Michajlik A. and Filipiecki S. II. Klin. Chorób
Wewnętrznych A.M., Warszawa - POL. TYG. LEK. 1958, 13/30 (1143-1148)
Graphs 5 Tables 2

The kidney reaction to oral intake of water was observed in 5 healthy subjects and 18 patients with chronic failure of the circulation. All healthy subjects and 6 patients reacted with a normal water diuresis. In the remaining 10 patients a partial retention of the water absorbed was observed, the amount of water excreted ranging from 13 to 70%. A correlation was found between the water excretion ability and the value of osmotic charge simultaneously excreted with the urine. A similar correlation existed between the water excretion ability and the amount of Na simultaneously excreted with urine. The results obtained are consistent with the hypothesis that the outflow from the proximal canaliculi is considerably decreased in chronic failure of the circulation.

"Comparison of Geriocrine and Placebo Results in Healthy Old People"

Warsaw, Polski Tygodnik Lekarski, Vol XVIII, No 8, 18 Feb 1963, pp 287-291

Abstract: [Authors' English summary modified] Results of geriocrine and placebo administration for a month to healthy

1/2

POLAND

Warsaw, Polski Tygodnik Lekarski, Vol XVIII, No 8, 18 Feb
1963, pp 287-291 (continued)

old people were evaluated by a group of physicians who were unaware of the kind of drug administered to each patient. No effects on the mental or physical conditions of the patients different from those of placebo administration could be detected in the geriocaine group.

The results of this study do not eliminate the possibility of some effect of geriocaine if administered for a longer period. The evaluation of such effect would be, however, reliable only if compared with a proper control group. 6 tables; 2 diagrams; 11 references, mostly Eastern.

"Praca monitora podsadzkowego". Przegląd Górniczy. No. 3, 1953, pp. 102-104, 4 figs., 1 tab.

Examination of the Polish prototype of the low pressure MP 60 monitor with a water removing pipeline of 80 mm diameter. The op-

eration of the monitor. The quantity of water ejected by the monitor depends on the pressure before it. The pressure on the exhaust pipe depends on the pressure before the monitor. A simple method of checking, with the aid of a manometer, the quantity of water ejected by the monitor for various diameters of the exhaust pipe.
